HEXAGONAL SHAPE / TITANIUM

POINT

1 Screw-shaped tip with different outside diameters is used

The tip is shaped like a screw with large and small undulations. By making the tip fine, it reaches in deeply and the center's large diameter will scrape out the earwax. *Sense of use may vary between individuals.

*Graphic illustration

*Actual image

2 Easy-to-hold hexagonal shape Enclosed press manufacturing process that doesn't form burr is used

Easy to hold hexagonal shape, completely smooth and burr-free due to enclosed-press manufacturing. Smooth hexagonal shape is easy and comfortable to hold and control.

3 Pure titanium (99.85%) is used

People with metal allergies can use it without worry. Also, it is corrosion-resistant and light weight. *Please note that in extremely rare cases, individuals may be allergic to titanium*

4 Made in Japan

World's top level precision screw manufacturing technology is used for production.

5 There is a wide color variation

The color versions are created by coating the grip portion with a special 4-layer hard spray coating*, while the high-grade versions are fabricated using real gold or platinum foil. *Since these models are hand-sprayed, every one is unique and there may be variation between models of the same color.

6 Perfect as a communication tool

It is a perfect tool for enhancing communication between families, parents and children, and lovers.

You may be concerned that it might hurt since it is made from metal. However, the ultra-high precision finish of the Magical Ear Pick - which is the result of over a half century of experience in machining, will feel smooth and pain-free.

We will not be liable for any claims, injury or damages of any kind caused by improper use or handling of this product.
